

Is Botox Right for Me?

Botox is a facial injection procedure is performed over 1 million times every year on first time patients alone! So yeah, it's pretty popular. Based on its popularity and proven effectiveness, you may have found yourself asking if Botox is right for you.

1. Do I feel younger than I look?

If you've ever felt like the you on the inside and the you on the outside are different, Botox may be for you. By having an injection, you are working to smooth and enhance your natural, youthful facial features. Botox helps bring the outside you and the inside you together.

2. Am I worried about surgical revitalization?

Nothing against cosmetic surgery, but any time you are going "under the knife" there are certain risks that just aren't present with a simple injection. One of Botox's many reasons for popularity is its impressive safety profile and outpatient status. If you find yourself worried about the prospect of an invasive surgical procedure to reverse facial aging, then Botox is the perfect solution. Not a fan of huge needles? Who is? Botox boasts one of the smallest needles in the injectables game. Many patients claim to not even feel it.

3. Am I looking for a safe procedure?

With less side effects and fewer deaths recorded from its millions and millions of uses, Botox (manufactured by Allergan and administered by a trained professional) is safer than Aspirin. Statistically speaking, the last time you popped an Aspirin tablet, you were taking a bigger risk than you do by having a Botox injection.

4. Do I like it when things work?

Okay, really. Who is going to answer no to that. In addition to being one of the safest cosmetic procedures, Botox is also one of the most effective cosmetic procedures you can have done. Having your procedure performed by a certified injection specialist also guarantees the follow up will be scheduled and administered properly.

5. Am I ready to start making important life changes?

Botox is a huge boost for your confidence and a great way to enhance your self image. Very little is comparable to the feeling when the youth you feel on the inside matches your smooth complexion. Making a change is good, but making a smart change is better. Botox provides the record of safety and effectiveness that you can rely on.

If you've answered yes to these questions, then Botox may be for you.

There are minor risks and side effects that come along with the procedure so you'll want to consult a certified Botox injector before having the procedure done.
